

OBJECTS

Definition

"Objects store data in key-value pairs."

Purpose

Objects organize related data together.

Syntax

```
let student = { name: "Sehrish", age: 20 };
```

Access Properties

```
console.log(student.name);
```

Add Properties

```
student.city = "Gujrat";
```

Object Method

```
let user = {  
  greet: function() {  
    console.log("Hello");  
  }  
};
```

Nested Objects

```
let school = {  
  student: {  
    name: "Schrish"  
  }  
};
```

Object Destructuring

```
const { name, age } = student;
```

JSON Conversion

```
JSON.stringify(object);  
JSON.parse(jsonData);
```

Cloning Object

```
let copy = { ...student };
```

Real World Use

Objects are used in:

- user profiles
- API
- databases
- ecommerce systems
- authentication systems

Important Points

- Objects store complex data.
- this refers to current object.
- JSON is used in APIs. and Spread operator creates copies.
